

PHONE CONVERSATION
Tony Gallegos, DOGM

S/047/036

On October 3, 1994, I returned a call to John Robinson (801) 789-5293. He is the contractor doing reclamation work on old exploration sites and the Cameron #1 site for Native Asphalt Company. He wanted to let me know that last Friday and Saturday (Sept. 30, Oct. 1) he did some work at the Cameron site. Weather and soil conditions were right so he placed the soil material on the area which had been scalped for gravel on the northeast portion of the site. The soil is placed but has not been scarified or seeded. John intends to do that sometime later after DOGM inspects the work. He does not expect to be back at the Cameron site for some time. It has been raining in Vernal and continues to rain today. He will be working on the exploration sites for the next while. John will call me when he is getting ready to work on the Cameron site again.
